Managing waste-water on the rooftop has become a challenge as the EPA and other AHJ get more strict on what enters the storm-water systems. Now, Omni Containment Systems brings you the next generation of hinging and fan cleaning waste-water Management in one application...

QUICK-FIT EZ CLEAN SUPER HINGE

Inspired by Jason Wellman

By combining our patented Super Hinge™ technology with a new Jason Wellman inspired pivot system, Omni has created a hinge that is not only fully NFPA96 compliant with hinging and service hold-open retention codes, but also resolves on the roof wastewater issues. When coupled with our industry leading Grease Gutter™, Roof Guardian™, Grease Box™, or EFI-360™ System, you and your customer now have a guaranteed rooftop protection system (even during cleanings.)

- Made in the USA of the same solid steel used in the SuperHinge™
- Easy Open/Close Technology with **built in Service Hold-Open Retainer** (a key NFPA96 requirement)
- Balanced Weight Distribution for easy opening
- Patented Tilt Hold Technology that ensures water is drained into the hood system, not onto the rooftop
- Prolongs the life of your fan by properly hinging and distributing the weight
- Provides a safer environment for cleaning, service, and inspection
- Prolongs the life of any rooftop containment system media by channeling all chemicals and waste down the duct into your cleaning waste water catch system
- Meets recycle parameters for specifications such as IKECA, IFC and more
- Exceeds federal, regional, and local storm water protection regulations
- May help contribute to LEED Certification
